

ARIA Shield Runtime Enforcement vs Competitors

Vendor	Category	Budget Enforcement	402 Semantics	Streaming Caps	Cryptographic Receipts	PDP Route Mapping
ARIA Shield	Shield	Yes	Yes	Yes	Yes	Yes
Curity Token Handler	Shield	No	No	No	No	Yes
Kong Gateway + OIDC	Shield	No	No	No	No	Yes
NGINX (Gateway) + OIDC	Shield	No	No	No	No	Yes
Cloudflare AI Gateway	MCPGateway	No	No	No	No	No
Portkey	MCPGateway	No	No	No	No	No
Helicone	MCPGateway	No	No	No	No	No
Amazon Bedrock (AI Gateway/Controls)	Adjacent	No	No	No	No	No
WrangleAI	Adjacent (Cost Governance)	No	No	No	No	No
Mavvrik	Adjacent (Cost Governance)	No	No	No	No	No
Credo AI	Adjacent (Governance)	No	No	No	No	No
Robust Intelligence	Adjacent (Security/Validation)	No	No	No	No	No
Arize AI	Adjacent (Observability)	No	No	No	No	No
Evidently AI	Adjacent (Observability)	No	No	No	No	No
Helicone	Adjacent (Gateway+Observability)	No	No	No	No	No
Coralogix	Adjacent (Observability)	No	No	No	No	No
Datadog	Adjacent (Observability)	No	No	No	No	No
New Relic	Adjacent (Observability)	No	No	No	No	No
Dynatrace	Adjacent (Observability)	No	No	No	No	No

Notes:

- "Yes" indicates first-class, provable runtime controls embedded inline on request execution.

- Adjacent tools are complementary for visibility/governance but generally do not enforce per-request constraints.

Explanation (why cost governance $\neq$ runtime budget enforcement):

- Runtime budget enforcement requires being inline on every request to pre-authorize/hold against a budget ledger, decrement idempotently on completion, fail closed with deterministic HTTP 402 when over limit, apply mid-stream caps, and emit per-call cryptographic receipts.
- Cost governance tools typically provide token/GPU visibility, forecasting, budgets, alerts, and chargebacks; sometimes provider/account-level spend limits. These are reactive or coarse controls, not per-request enforcement.
- Provider quotas/alerts can cut off accounts or raise tickets but do not block a single off-budget call with 402 semantics, nor do they issue per-call receipts or enforce streaming caps.
- Some gateways offer rate-limiting/caching/routing, but rate limits are not the same as budget ledgers with 402 semantics and receipts.
