

EmpowerNow — Investor Deck (Tightened)

1) Title / Category Claim

EmpowerNow

The Tool Factory for Enterprise AI Agents

Any API → Secure Agent Tool → 5 Minutes

The Reality: Enterprises need thousands of agent tools. **Custom builds take weeks per integration.**

Our Breakthrough: **CRUD Service** creates governed tools **in minutes, not months.**

The Result: Agents that actually work—**with authorization, budgets, and receipts built in.**

From the team behind EmpowerID • \$20M+ revenue • 15 years • Fortune 500 trusted

Presenter Script (15 seconds)

“Agents without tools are useless. Tools without governance are dangerous. **CRUD Service** solves both problems **in 5 minutes**. Watch us turn your Salesforce API into a secure agent tool that works across **MCP, Copilot, and OpenAI Functions.**”

2) The \$100B Problem (Why Now)

- **Runaway AI spend** from retries/agent sprawl → **per-route/agent budgets (402)** and pre-exec guardrails required.
- **New MCP attack surface** → **plan & schema pin validation** to block prompt-injection/tool overreach **before** models run.
- **Agents need tools to do work** → tools must be **least-privilege** and **provably governed** (receipts).
- Today controls are **platform-specific**; there's **no cross-platform enforcement or receipts**.
→ Enterprises need a neutral layer to **create tools safely**, **enforce constraints**, and **prove** every action.

3) Neutral OEM Strategy → More Channels, Lower CAC, Larger TAM

Neutral = we enable every stack instead of competing with it.

- **Partner to all, conflict with none:** OEM/white-label with agent platforms & IGA/PAM—we **plug in**; we don't rip/replace.
- **Distribution arbitrage:** Platforms & SIs keep the relationship; **we power enforcement + receipts** across estates.
- **Illustrative math:** direct only (win a slice) vs. **embedded across partner ecosystems (10–30× reach)**.

Illustrative uplift depends on attach rates & SKU placement.

4) Live Demo (90s): **Author Once** → **Publish Many**

- Build once in **Automation Studio** (YAML) → publish to **MCP**, **OpenAI Functions**, **Microsoft Copilot**.
- **CRUD Service** turns any **API/DB** into **no-code MCP tools** (schema pins, policy hooks).
- Invoke from each: **PDP** applies constraints; **Gateway/Shield** enforce; **Receipt** captured.
- **Takeaway:** unified governance **without** forcing a single platform.

5) Why Identity Experts Win

- **Enterprise trust:** 15+ years running identity for global regulated brands (*EmpowerID heritage*).
- **From RBAC/ABAC to agents:** we already model **who/what/for whom/constraints**—now applied to **tools, spend, content** at runtime.
- **Distribution:** existing procurement paths → faster starts & references.
- **Operating ethos:** mechanisms and evidence—**pre-exec validation, runtime guardrails, cryptographic receipts**.

Footnote: Logos/clients are EmpowerID platform customers; EmpowerNow is a new product.

6) Agents ≠ Chat: Tools = Work (CRUD Service = Tool Factory)

- **Agents create value only through tools.**
- **CRUD Service** generates **no-code integrations** so any **API/DB** becomes an **agent-safe MCP tool** with schema, auth, and guardrails.
- **Author once → publish many:** packaged for MCP/Functions/Copilot with **policy hooks** baked in.
- **Outcomes we'll demo:** time-to-first-tool **<10 min**; safe expansion; consistent governance across platforms.

7) What We Are (Layer-2 Middleware)

- **Create tools fast** — **Automation Studio + CRUD Service** → MCP Tools/Resources/Prompts; adapters for non-MCP.
- **Decide & constrain** — **EmpowerID PDP / Authorization Studio** → standardized decision (constraints/obligations/TTL).
- **Enforce & prove** — **ARIA MCP Gateway** (pre-exec), **ARIA Shield** (inline), **Receipt Vault** (cryptographic audit chain).
- **Stay accurate** — **Inventory Studio** keeps identity & entitlements fresh for PDP/PIP.

8) Platform Coverage (Adapters = Moat)

- Initial GA targets: **Anthropic MCP, OpenAI Functions, Microsoft Copilot, Google Vertex, AWS Bedrock, LangChain/LangGraph, LlamaIndex.**
- Principle: **author once** → **publish many** (shared schema; per-platform manifests).
- DX goals: **5-minute** tool creation; **1-line** policy call; **drop-in** budget/content controls.
Adapters: GA/Beta per platform—weekly ship cadence (see changelog).

9) Proof & Momentum (Demo-able today)

- **Ship cadence:** weekly adapter releases; public changelog (sparkline).
- **What we can demonstrate live:**
 - **Tool creation** in under 10 minutes (test env).
 - **Pre-exec block** of off-policy MCP calls (plan/schema pins).
 - **Budget 402** with cost attribution.
 - **Receipt** showing { decision_id, policy_hash, tool_schema_hash, ttl_ms } .
- **Commercial:** active POCs/design partners; SI enablement in progress.

10) Business Model (Clear & Credible)

- **Governed endpoints** (critical tools/routes): **\$500 / endpoint / month** (typical).
- **Decision usage** per 100k; **Receipts** per 10k; **Catalog seats** for authors; **OEM/white-label** rev share.

11) Economic Framing (Realistic)

- Typical enterprise: **~50 tools, ~20 critical endpoints** (each governs many agents).
- **Average account:** $20\text{--}50 \text{ endpoints} \times 500 = 10\text{k--}25\text{k/month} \times * \rightarrow **120\text{k--}300\text{k ARR}$ (+ usage + seats).
- **Scale scenario:** 1,000 mid-tier accounts → $120M\text{--}300M$ **core ARR** (pre-OEM/usage).

12) Studios Overview (No-Code; Demo-Ready)

- **Automation Studio → CRUD Service (backend)**

No-code MCP tool & workflow designer — turn any API/DB into **agent-safe tools**; publish with policy hooks.

- **Authorization Studio → PDP (backend)**

Policy UI (ABAC/constraints/obligations/TTL) — **standardized decisions** for budgets/content/params.

- **Authentication Studio → IdP (backend)**

Agent Passports & token exchange (on-behalf-of / least-privilege) — scoped identity without long-lived tokens.

- **Inventory Studio → Data Collector (backend)**

Identity & entitlement lineage — keeps PDP **context fresh**; leveraged more in IGA.

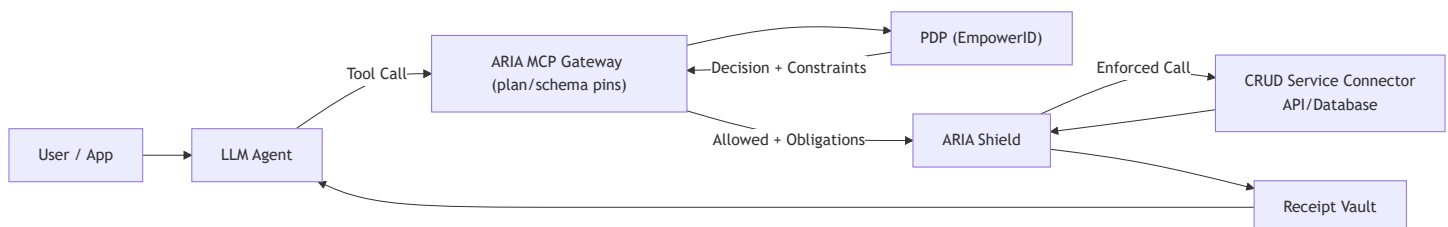

Flow: Design (Automation) → Decide (PDP) → Enforce (Gateway/Shield) → Prove (Receipts).

Monetization: Endpoints, decisions, receipts, author seats.

13) Runtime Enforcement & Proof (What Auditors Love)

- **Contextual authorization: PDP** evaluates **who/what/for whom/constraints** per call.
- **Pre-execution gating: ARIA MCP Gateway** validates **plan & schema pins**; blocks off-policy calls **before** models run.
- **Inline enforcement: ARIA Shield** applies **budgets (402)**, streaming/param allow-lists, and **egress filters** during execution.
- **Identity propagation: OAuth 2.1 + Token Exchange (RFC 8693)** for on-behalf-of; short-lived tokens; no long-lived secrets.
- **Receipts:** { decision_id, policy_hash, tool_schema_hash, cost_usd, ttl_ms } for audit & FinOps.

Architecture (or Appendix):

Gate → Decide → Enforce → Prove.

14) Interface Moats (Patents)

- **Graph-Anchored ABAC** — policies as graph nodes → resolver → *standardized decision*.
- **Agent-Centric Workflow** — agent-ready next steps from YAML; universal auth; standardized audit logs.
- Locks **policy**→**decision** and **agent**→**next-step** interfaces that partners adopt.

15) Team — Distributed Technical Bench (No Single Point of Failure)

- **Patrick Parker — Founder & CEO (EmpowerID)**
20+ yrs enterprise identity; architected EmpowerID to \$20M+ revenue • RBAC→ABAC orchestration for regulated brands
- **Bradford Mandell — SVP Sales & Cofounder**
Olin BSBA; Harvard exec ed • *(Add proof)* “Closed \$XMM+ enterprise programs; multi-year SI/ISV alliances”
- **Ujwal Halkatti — Chief Operating Officer**
12+ yrs at EmpowerID; product quality & customer success • Former Dir. Software Dev, SolarWinds; Dir. Product, Tek-Tools
- **Carles Dalmau — VP, Product Architecture**
Security modeling & workflow orchestration; policy runtime design
- **Cristiana Vicovan — Director, Product Management**
Former startup CTO; **CTO of the Year (Europe)**; ex-Oracle Cloud — bridges product & architecture

One-liner: **Distributed CTO model** → velocity, resilience, zero key-person risk.

NEW — Slide X: Controls & Evidence (Stage-Honest)

Controls mapped to audit objectives, with evidence and current status.

Audit objective	Control	Evidence	Status
Identity propagation	OAuth 2.1 + RFC 8693 TE	Short-lived token + TE assertion	Implemented
Pre-exec validation	MCP plan/schema pins	Blocked call (402) + policy hash	Demo available
Runtime guardrails	Budgets/params/egress	Budget event + route config	In testing
Decision consistency	OpenID AuthZEN PDP	Decision log (constraints/obligations/TTL)	Implemented
Proof / non-repudiation	Receipt Vault	6-line receipt (prod format, test data)	Prototype

No-BS Guarantee: we show exactly what works today, what's in testing, and what's next.

NEW — Slide Y: Design Partner Program

- **What we can run live today:** tool creation, pre-exec block, budget 402, receipt.
- **What you get:** roadmap influence, preferred pricing, white-glove onboarding.
- **What we ask:** 2 real use-cases, weekly working session, let us measure TTF tool & spend blocked.
- **Target window:** Q1–Q2; first production go-lives ≤ 90 days.

Appendix (4 slides)

A1) Competitive + Distribution Frame

- **Gateways/observability:** lack **enforcement + receipts**
- **Orchestration frameworks:** no identity policy/budget/content/audit
- **IGA/PAM:** lack **agent runtime governance + receipts + adapters**

- **DIY:** slow/brittle

Distribution wedges: Installed base (EmpowerID), Platforms (OEM/white-label), SIs/GSIs (vertical kits), Marketplaces (AWS/Azure/GCP)

A2) Neutral by Design (Trust)

Separate infra/contracts from EmpowerID; neutrality advisory board; open-source **receipt verifier**; customer-controlled keys.

A3) KPIs to Instrument (Operating Cadence)

Pilot→prod **>60%** ≤ 90 days; **≥ 3 GA adapters** in 2 quarters; “publish to 3 platforms” **< 1 hour**; GM **≥ 80%**; CAC payback **< 12 mo** (direct).

Expansion: **endpoints/account, receipts/day, seats, partner-attached ACV**.

A4) 12-Month Milestones / Early Validation / Team & Ask

Coverage: MCP + two of OpenAI/Copilot/Vertex/Bedrock GA • Partners: 1 platform LOI, 2 SI design-partners • Scale: 1 F100 at **1k+ agents/tools** • Trust: OSS verifier + neutrality board.

Why distributed beats single-CTO: no key-person risk; parallel tracks (adapters, PDP, studios); proven tenure; add CTO title later for external clarity.

Team & raise terms: [as drafted].

One-Pager (Handout)

EmpowerNow — The Universal Agent Governance & Integration Layer

What: A neutral Layer-2 to **create tools once, enforce policy/budgets across platforms**, and **prove every action** with cryptographic receipts.

Tools = Work (CRUD Service): turns any **API/DB** into an **agent-safe MCP tool**—no code, schema-pinned, auth-aware, **policy-ready**.

Fine-Grained Control: **ARIA MCP Gateway** (pre-exec), **ARIA Shield** (runtime), **EmpowerID PDP** (contextual decisions) → **audit-ready receipts**.

Studios: Automation • Authorization • Authentication • Inventory

Runtime: MCP plan/schema pins • budgets (402), param allow-lists, egress filters • **Receipt Vault** (decision/policy/schema/cost).

Neutrality & Moat: OEM/white-label; separate from EmpowerID; **open-source verifier**; patents pending (**Graph-Anchored ABAC**, **Agent-Centric Workflow**).

Pricing (indicative): $500 / \text{governed endpoint} / \text{month} * * + \text{usage} + \text{seats}; \text{OEM rev} - \text{share}.$ $* * \text{Typical account} : * * * * 20-50 \text{ endpoints} \rightarrow \text{120k--\$300k ARR (+ usage + seats)}.$

12-Month Goals: 3+ adapters GA, 1 platform LOI, 2 SI partners, 1 F100 at 1k+ agents/tools, OSS verifier live.

CTA: Platform & SI intros • Lighthouse pilots • Data room access.

Presenter micro-script (20s)

“Agents only create value through **tools**. **CRUD Service** is our **tool factory**, turning any API or database into an **MCP-ready tool** with policy hooks. **EmpowerID PDP** decides context; the **ARIA MCP Gateway** gates **before** the model runs; **ARIA Shield** enforces budgets, parameters, and egress **during** execution. Every action is **receipted**.”

Final checklist for this version

- ☒ “CRUD Service” has a space everywhere (cards, bullets, diagram labels).
- ☒ Slide 13 duplicate bullet removed; identity anchored to **RFC 8693**.
- ☒ “Switzerland” reframed to **Neutral OEM strategy**.
- ☒ **Controls & Evidence + Design Partner** slides added to the core (not just appendix).
- ☒ No implied scale/vanity stats; **demo-able proofs** instead.

This is ready to ship as your “Pitch 3.1 Tight” deck.
