

EmpowerNow — Investor Deck (Final, AI-Sizzle + Authority)

1) Authority Open — Claim the Category

EmpowerID + EmpowerNow

The \$20M IAM Leader Defining Agent Governance

We've secured enterprise identity since 2005.

Now their **AI agents** need the same governance—and we're delivering it.

Any API → Secure Agent Tool → 5 Minutes

2024 revenue: 20M + •ARR : 8.8M • 15 years • Enterprise-trusted [If verifiable: Profitable]

2) The Agent Moment (Context with Sizzle—no FUD)

The Agent Explosion Is Here

- **Anthropic MCP launched:** agents can call tools natively
- **Copilot & OpenAI ecosystems:** enterprise agent platforms standardize
- **Reality inside the firewall:** teams are piloting **hundreds** → **thousands** of agents

The Governance Gap

- No **cross-platform** controls
- No **pre-execution** validation
- No **budget/egress** limits
- No **receipts** to prove actions

→ **EmpowerNow** fills the gap.

3) Why We Win — Unfair Advantages

- **20 years governance:** identity-grade controls & audit, at scale
- **Execution:** established enterprise business, shipping cadence
- **Distribution:** enterprise relationships & procurement paths
- **Team:** long-tenured, distributed leadership; no single key risk
- **Innovation: CRUD Service** productizes 20 years of connector expertise

Not a pivot—expanding governance from humans to agents.

4) What We Do (One Picture)

Create — CRUD Service → MCP-safe tool (schema pins + policy hooks)

Control — MCP Gateway (pre-exec pins) + **AuthZEN PDP** (decisions) + **ARIA Shield** (budgets/egress/params)

Prove — Receipt Vault (decision_id, policy_hash, tool_schema, cost, ttl_ms)

(Thin pipeline diagram: API → CRUD → Gateway → PDP → Shield → Receipt)

5) Live Demo (90s) — Proof > Promises

- **0–30s:** Salesforce API → **tool created** (no code)
- **30–60s:** **Publish once** → MCP, Copilot, OpenAI Functions; invoke
- **60–90s:** **Pre-exec block** (pins) → **HTTP 402** budget event → **6-line receipt**

Takeaway: Author once → publish many **with governance built in**.

6) Create — CRUD Service (Hero with Compare)

Outcome: Turn any API/DB into an **agent-safe tool**; publish once across platforms.

Without → With CRUD Service

- ~6 weeks → **~5 minutes**
- Custom code → **No code**
- One stack → **MCP • Copilot • Functions**

- Unclear guardrails → **Schema pins + hooks**

CTA: Quickstart (primary) • Adapter catalog (secondary)

Times are representative; shown live in demo.

7) Control — Complete Enforcement Stack

- **Pre-execution (MCP Gateway, GA):** validate **plan & schema pins**; block off-policy calls **before** models run
- **Authorization (AuthZEN PDP, GA):** standardized **who/what/for-whom/constraints** (+ obligations/TTL)
- **Runtime (ARIA Shield, Beta):** **budgets (HTTP 402)**, parameter allow-lists, egress filters; cost attribution

CTA: Security brief • Reference architecture

8) Prove — Receipts (Code Proof Atom)

```
{ "decision_id":"d-9f2",
  "policy_hash":"sha256:a1c",
  "tool_schema":"mcp_v2.1",
  "cost_usd":0.012,
  "timestamp":"2025-01-27T10:23:45Z" }
```

Why it matters: cryptographic, per-call evidence for audit & FinOps.

9) Neutral OEM Strategy → Channels, Lower CAC, Larger TAM

- **Partner to all, conflict with none:** OEM/white-label; SI co-sell; marketplaces
- **Universal compatibility:** MCP • Copilot • OpenAI Functions • Vertex/Bedrock • LangChain
- **Illustrative reach:** embedded can drive **10–30×** more accounts than direct alone

Illustrative; depends on attach & SKU placement

10) Customer Validation (*keep AI sizzle, verify claims*)

Live today

- **[If verifiable] X** enterprise POCs (software-led model)
- **[If verifiable] \$Y M** qualified pipeline
- **[If verifiable] Z** governed API calls **this week**
- **Optional quote (approved):** “Only EmpowerID understood governance at the depth we require.”
— Enterprise CISO

Safe fallback: active design partners in regulated industries; **demo-able controls today.**

11) Business Model & Unit Economics (Endpoint ARR Bridge)

Pricing primitives

- **\$500 / governed endpoint / month** (core)
- **Usage:** decisions / receipts
- **Seats:** authors
- **OEM rev-share**

Example (illustrative):

30 endpoints/account → **15kMRR/180k ARR** (ex-usage)

20 accounts → **\$3.6M** core ARR

Why this scales: revenue decouples from services headcount.

Label clearly: Illustrative; examples for modeling only.

12) EmpowerID Advantage — Foundation, Not Baggage

- **\$20M+** revenue; **[If verifiable] profitable, self-funded**
- Enterprise trust; procurement vehicles in place
- Identity lineage enriches agent policy truth
- Long-tenured engineering team

You're investing in a **managed expansion** built on a proven core.

13) Controls & Evidence — Status (Stage-Honest)

Audit obj.	Control	Evidence	Status
Identity propagation	OAuth 2.1 + RFC 8693 TE	Short-lived token + TE assertion	Implemented
Pre-exec validation	MCP plan/schema pins	Blocked call (402) + policy hash	Demo available
Runtime guardrails	Budgets/params/egress	Budget event + route config	In testing
Decision consistency	OpenID AuthZEN PDP	Decision log (constraints/obligations/TTL)	Implemented
Proof / non-repudiation	Receipt Vault	6-line receipt (prod format, test data)	Prototype

No-BS guarantee: we show what works today.

14) 12-Month Milestones & Design Partners

Milestones

- **3+ adapters GA, 1 OEM LOI, 2 SI partners**
- **≥1 F100 at 1k+ agents/tools**
- **Receipts/day & % spend blocked (402)** reported monthly
- **Publish to 3 platforms < 1 hour**

Design Partner Program

- Live: <10m tool; pre-exec block; 402; receipt
- You get: roadmap influence; preferred pricing; white-glove rollout
- We ask: 2 use-cases; weekly working session; KPI visibility; **≤90 days** to prod

15) The Investment Opportunity — Ask & Use of Proceeds

Why now, why us

- Agent platforms shipping; governance gap is immediate
- Proven team + shipping product + enterprise trust
- Strategy: neutral OEM + SI + marketplaces

Raise: \$15M Series A (*example*)

Use: CRUD Service adapters/DX • Gateway/Shield hardening • Receipts/Verifier • design-partner rollout • OEM/SI enablement

KPIs: endpoints governed • receipts/day • % spend blocked • time-to-first-tool • publish-to-3

16) Team (Quantified; keep it crisp)

- **Patrick Parker — CEO** (identity governance architect)
- **Bradford Mandell — SVP Sales** — **[If verifiable]** Closed **\$X M+** enterprise programs; built SI co-sell
- **Ujwal Halkatti — COO** — 12+ yrs EmpowerID; ex-SolarWinds eng leader
- **Cristiana Vicovan — Product / [CTO if you elect]** — former startup CTO; CTO of the Year (EU)
- **Carles Dalmau — VP Architecture** — security modeling & workflow orchestration

One-liner: distributed bench → velocity, resilience, zero key-person risk.

Keep the AI Sizzle (without overclaiming)

- **Agent platform name-checks** (MCP, Copilot, OpenAI Functions, Vertex/Bedrock) on Slides 2, 4, 5, 9.
- **Convergence graphic** (Slide 2): Platforms launching × Enterprise needs = EmpowerNow.
- **CRUD Service “factory”** metaphor (Slide 6) with the 5-minute compare.
- **Proof atoms** (Slides 5, 8, 13) instead of lofty adjectives.
- **“Neutral OEM”** reach narrative (Slide 9) with an *illustrative* 10–30× statement.

Final sanity checks (before sending)

- All **[If verifiable]** lines are true or swapped with the safe alternative.
- **Ask/UoP** explicit; **unit economics** labeled *illustrative*.

- **EmpowerID** framed as **advantage** and **distribution**, not “legacy.”
- **Demo** rehearsed: tool in <10m; pre-exec block; 402; receipt.
- “**CRUD Service**” spelled with a space everywhere.

TL;DR

We kept the **AI sizzle** (agent explosion, platform convergence, 5-minute tool factory, live demo) **and** the **authority** (EmpowerID foundation, proof, economics, OEM strategy). This drop-in deck leads from strength, shows real product magic, and makes the raise feel like **accelerating a managed expansion**, not funding a pivot.
