

Slide order: Problem → Switzerland (solution) → Live Demo → Why Us → Inevitability → What We Are → Coverage → Momentum → Model → Economics → Studios → Runtime & Proof → Patents → Network Effects → Competition → Neutrality & Trust → Distribution → KPIs → 12-Month Milestones → Early Validation → Team & Ask → Close.

3–5 bullets per slide. One visual each (diagram, screenshot, or logo strip).

1) Title / Category Claim

EmpowerNow — The Universal Agent Governance & Integration Layer

- No-Code AI Integration (**Automation Studio**)
- Policy & Constraints (**Authorization Studio**)
- Passports / Token Exchange (**Authentication Studio**)
- Identity Inventory & Lineage (**Inventory Studio**)
- Runtime Enforcement (**ARIA Shield • MCP Gateway**)

Built by EmpowerID — IGA/PAM since 2005; \$20M+ revenue; trusted by global brands

2) The \$100B Problem

- By 2026: **1k–10k+ agents/enterprise** across **5+ platforms** (OpenAI, Anthropic/MCP, Copilot, Vertex, Bedrock, LangChain, custom).
- Controls are **siloed**; “governance” is **platform-specific**; **no cross-platform enforcement or receipts**.
- Outcome: spend bleed, off-plan tool calls, audit findings → **AI rollouts stall** without a unifying layer.

3) Switzerland = 100× Bigger

- **Enable everyone, compete with no one**: OEM/white-label for all IGA/PAM vendors and agent platforms.
- Neutrality multiplies distribution, lowers CAC, compounds network effects.
- TAM expands from “our customers” to **every enterprise using agents** (platforms, SIs, DIY).

4) Live Demo (60–90s): **Code-Free to Cross-Platform, Governed**

- In minutes, build a code-free connector workflow in **CRUD Service** (Automation Studio).
- One-click publish that workflow as an **MCP Tool**; adapters output manifests for **OpenAI Functions** and **Copilot**.
- Call it from each platform; **Authorization Studio** enforces constraints, **PDP** applies spending/content controls, **Gateway/Shield** blocks off-plan, and a **Receipt** is issued.
- **Takeaway:** ship governed capabilities fast—without locking into one agent platform.

5) Why Identity Experts Win

- **Enterprise trust:** EmpowerID heritage in regulated, global environments.
- **Governance DNA:** policies, approvals, lineage, audit—now applied to agents.
- **Procurement & distribution:** existing pathways into large accounts; faster starts.

6) The Convergence Is Happening (Inevitability)

- **Tools converge:** MCP & Function-Calling are becoming common denominators.
- **Architectures converge:** multi-agent, cross-platform patterns standardize.
- **Compliance converges:** auditors expect governance, budget controls, **provable** enforcement.
- **Therefore:** one **neutral governance layer** becomes mandatory infrastructure.

7) What We Are (Layer-2 Middleware)

- **Create tools fast** — **Automation Studio** → MCP Tools/Resources/Prompts; adapters for non-MCP formats.
- **Decide & constrain** — **Authorization Studio** → standardized decision (constraints/obligations/TTL).
- **Enforce & prove** — **MCP Gateway & ARIA Shield + Receipt Vault** (cryptographic audit chain).
- **Keep identity truth fresh** — **Inventory Studio** (IGA/identity inventory & lineage) feeding PDP/PIP.

8) Platform Coverage (Adapters = Moat)

- Initial GA targets: **Anthropic MCP (native)**, **OpenAI Functions**, **Microsoft Copilot** actions, **Google Vertex** tools, **AWS Bedrock** Agents, **LangChain/LangGraph**, **LlamaIndex**.
- Principle: **author once** → **publish many** (shared schema; per-platform manifests).
- DX goals: 5-minute tool creation; 1-line policy call; drop-in budget control.

9) Proof & Momentum

- **Adapter cadence**: weekly releases; public changelog.
- **DX metrics**: time-to-first-tool **<10 min**; “publish to 3 platforms” live **<1 hour**.
- **Commercial signals**: platform POCs in motion; SI design-partner outreach; pilot→prod targets.

10) Business Model (Clear & Credible)

- **Governed endpoints** (tools/routes): **\$500 / endpoint / month** (typical).
- **Decision usage**: \$X per 100k decisions (constraints evaluation).
- **Receipts**: \$Y per 10k receipts (storage + verifier APIs).
- **Catalog seats**: \$Z / author / month (Studio authors).
- **OEM/white-label**: revenue share per governed endpoint/seat; marketplace co-listing.

11) Economic Framing (Realistic)

- **Typical enterprise**: ~50 unique tools, 20 critical endpoints (governed across multiple agents).
- **Average account**: $20-50 \text{ endpoints} \times 500 = 10k-25k/month$ → ****120k-\$300k ARR** (+ usage + seats).
- **Scale scenario**: 1,000 accounts at mid-tier → **120M-300M core ARR**, before OEM & usage expansion.

12) Studios Overview (No-Code • Standard Outputs)

- **Automation Studio** — code-free connectors/workflows; approvals; idempotent runs; publish as MCP tools (plus Functions/Copilot manifests).
- **Authorization Studio** — visual PDP policies; standardized decision (constraints/obligations/TTL) for PEPs and gateways.
- **Authentication Studio** — no-code client onboarding & **Agent Passports** (OAuth Token Exchange/RAR).
- **Inventory Studio** — identity/IGA inventory & lineage to improve policy accuracy (supporting backbone; not shown in demo).

13) Runtime Enforcement & Proof

- **MCP Gateway** — plan discipline & schema pins; deny off-plan **before execution**.
- **ARIA Shield** — spending control (budgets/402), streaming caps, and content controls (prompt/egress/PII redaction); zero-token SPA.
- **Receipt Vault** — decision_id, policy snapshot hash, tool schema/pin hashes for audit & forensics.

14) Patents (Interface Moats)

- **Graph-Anchored ABAC** — policies as graph nodes → resolver → standardized decision (constraints/obligations/TTL).
- **Agent-Centric Workflow** — agent-ready “next steps” (state/instructions/success criteria + diagram) from configs; universal authorization; standardized audit logs.
- Locks the **policy**→**decision** and **agent**→**next-step** interfaces partners adopt.

15) Network Effects Compound Value

- More tools in catalog → more enterprise value → more adoption.
- More enterprises → more tools created → broader coverage.
- More platforms supported → fewer blockers → faster attach.
- More receipts → stronger compliance baselines → higher stickiness.
- **Result:** winner-take-most dynamics in the neutral governance layer.

16) Competitive Frame (Honest)

Segment	Value	Gap We Fill
Gateways/observability	logs/routing/metrics	no cross-platform enforcement + receipts
Orchestration frameworks	agent logic	identity policy, budgets, multi-platform tools, audit
IGA/PAM vendors	identity authority	agent-runtime governance + receipts + adapters
DIY enterprise	bespoke fit	slow, brittle, single-platform, costly

17) Neutral by Design (Trust)

- Separate infrastructure, teams, and contracts from EmpowerID; third-party audits.
- Neutrality advisory board (incl. competitor reps); public rules of engagement.
- Open-source **receipt verifier**; customer-controlled keys.

18) Distribution Wedges

- **Installed base** (EmpowerID): fast starts, references, procurement-ready.
- **Platforms**: OEM/white-label under partner brands (agent studios/gateways/PDPs).
- **SIs/GSIs**: vertical catalog kits + policy packs; delivery playbooks.
- **Marketplaces**: AWS/Azure/GCP transactable SKUs.

19) KPIs to Instrument

- Pilot→production conversion **>60%** in ≤90 days.
- Adapters GA **≥3** in two quarters; “publish to 3 platforms” **<1 hour**.
- Software GM **≥80%**; CAC payback **<12 months** (direct); OEM CAC near-zero.
- Expansion: endpoints/account, receipts/day, catalog seats, partner-attached ACV.

20) 12-Month Milestones

- **Coverage:** MCP + two of OpenAI/Copilot/Vertex/Bedrock GA.
- **Partners:** 1 platform LOI; 2 SI design-partners.
- **Scale:** 1 Fortune-100 at **1k+ agents/tools**; receipts/day KPI; audit outcomes.
- **Trust:** OSS receipt verifier live; neutrality advisory board launched.

21) Early Validation (today)

- **3 enterprise POCs** initiated (retail, manufacturing, financial services).
- **MCP adapter complete; OpenAI adapter in testing.**
- **147 governed API calls** executed in POC environments.
- **Time-to-first-tool: 7 minutes** (target: 5 minutes).

22) Team & The Ask

- **Patrick Parker — Founder & CEO, EmpowerID**
 - 20+ years in enterprise identity; pioneered Role/Attribute-Based Access Control in Identity Orchestration.
 - MBA (Ohio State), MS Biology (Penn State), BS Zoology (Ohio University).
 - Former evolutionary biologist identifying new species; applies research rigor to Identity Governance & Analytics.
- **CTO — [Name]** (*insert name/biography; if search in progress, list interim technical advisors on call*)
- **Head of Product — [Name] • Head of BizDev — [Name]**
Raising: 15M Series A * *(first close * *8M) — priced round, prior investors participating
- **Use:** 40% adapters & DX; 30% partner engineering (OEM/SI kits); 20% Studios & receipts tooling; 10% neutrality/audits
- **Board:** 2 new investor seats; 1 independent
- **Timeline:** first close within **45 days**

23) Close

Create tools once. Enforce policy everywhere. Prove every action.

The neutral layer the agent economy will standardize on—built on 20 years of enterprise trust.

Call to action: platform & SI intros • lighthouse pilots • data room access

Investor One-Pager (Handout)

EmpowerNow — The Universal Agent Governance & Integration Layer

What: neutral Layer-2 middleware to **create tools once**, **enforce policy & budgets** across agent platforms, and **prove** every action with cryptographic receipts.

- **Studios: Automation** (no-code tools; multi-platform publish), **Authorization** (standardized decisions), **Authentication** (Agent Passports/Token Exchange), **Inventory** (IGA identity inventory & lineage).
- **Runtime: MCP Gateway** (plan/schema pins), **ARIA Shield** (budgets/402 • streaming caps • zero-token SPA), **Receipt Vault** (audit chain).
- **Neutrality:** OEM/white-label by any vendor; separate infra from EmpowerID; open-source verifier; advisory board.
- **Patents:** Graph-Anchored ABAC (policy→decision), Agent-Centric Workflow (agent next steps + universal auth + audit).
- **12-mo goals:** 3+ adapters GA; 1 platform LOI; 2 SI partners; 1 Fortune-100 at 1k+ agents/tools; OSS verifier live.
- **Pricing (indicative): \$500 / governed endpoint / month** + decision/receipt usage + catalog seats; OEM rev share.
- **Typical account:** $20-50 \text{ endpoints} \times 500 = 10k-25k/month$ $\times$ $(=120k-\$300k \text{ ARR})$ + usage + seats.
- **Contact:** <Name • Email • Phone> — QR → Data Room

Demo Scripts (90 seconds)

Demo 1 — Author Once → Publish Many

1. Build “Create Contractor” in **Automation Studio** (YAML).
2. Publish to **MCP**, **OpenAI Functions**, **Copilot**.

3. Call from each platform: **Authorization Studio** constraints enforced; **Gateway/Shield** handle off-plan/budget; open **Receipt**.

Demo 2 — Policy + Identity Accuracy

1. Decision depends on current entitlements; **Inventory Studio** refresh updates PDP/PIP; re-evaluate → correct outcome.
2. Repeat on another platform; consistent deny/permit; **Receipt** chains decision_id + policy snapshot + pins.
