

Secure every human, service, and AI agent with one Identity & Authorization Fabric

- What it is: One fabric that puts the same policy in front of your APIs, apps, and AI agents. Includes ARIA Shield (gateway), Authentication, Authorization, Automation Studio, and Inventory.
- Why it matters:
 - Real-time authorization on every request and tool/model call
 - Policy-enforced budgets and limits to control AI spend
 - Reduce data-exfiltration risk and prevent privilege misuse with enforceable guardrails
 - Clear audit trails and evidence for compliance
 - Adopt incrementally; run cloud or self-hosted; data stays in your tenant; approvals and segregation of duties (SoD) supported
 - Config-as-code (YAML) with PR-gated changes and instant rollback

What you get

- ARIA Shield (Gateway)
 - One secure front door for apps and agents (server-side login/session)
 - Real-time policy checks and budget enforcement on API, tool, and model calls
 - Built-in guardrails: tool attestation, receipts
 - Logs to your SIEM; no tokens in the browser
 - Per-call enforcement returns allow/deny with reason; receipts retrievable via API
 - Optional mTLS to upstreams; per-route rate limits and allowlists
- Authorization (Policy Engine)
 - OpenID AuthZEN-compliant PDP; obligations & budgets; enforcement (PEPs) across services
 - Break-glass and deny-all controls; per-route kill switches
- Authentication (IdP)
 - Standards-based sign-in with short-lived, scoped tokens
 - Works with Okta and Microsoft Entra ID
 - Simple header-based integration for agents and services
- Automation Studio (No-Code connectors as authorized MCP Tools)
 - Build and publish connectors as MCP Tools without code; policy checks on every run with approvals, budgets, and receipts
 - Declarative, versioned tool schemas; policies and budgets applied per tool
 - Secrets via CyberArk/Vault; least-privilege service identities
- Inventory (No-Code inventory connectors for any IGA)

- Continuous discovery for contextual policy; feeds SailPoint/EmpowerID and others

Use cases

- Govern human and AI agent usage with real-time authorization, spend limits, and budgets — with developer-friendly allow/deny signals and receipts for troubleshooting
- Standards-based real-time authorization (OpenID AuthZEN) for apps and AI processes
- No-code connectors and graph workflows as MCP tools for agents and humans
- Zero-trust API front door for SPAs/mobile: one origin, consistent enforcement and logs

Why we're different

- One policy everywhere: same decisions at the gateway and in services
- Agent-ready by design: guardrails and spend controls for tools and model calls
- Open, vendor-agnostic components you can adopt incrementally

Coexistence

- Keep Okta/Microsoft Entra (sign-in), SailPoint/EmpowerID (IGA), CyberArk/HashiCorp Vault (secrets/session)
- EmpowerNow adds unified authorization and an agent-aware gateway with budgets and receipts

Open standards

- OpenID AuthZEN + governed OAuth; OIDC/SCIM/CAEP supported

Get started

- Quickstart: ARIA Shield + Authentication + Authorization; add Automation Studio and Inventory as you grow
- Deployment: containers (Kubernetes or VM); integrates with existing IdP/SIEM
- Contact: identityfabric@empowernow.ai
