

Secure every human, service, and AI agent with one Identity & Authorization Fabric

- What it is: One fabric that enforces the same policy for APIs, apps, and AI agents: ARIA Shield (gateway), Authentication, Authorization, Automation Studio, and Inventory.

Why it matters

- Real-time authorization on every API/tool/model call
- Budgets and limits to control AI spend
- Guardrails prevent data exfiltration/privilege misuse; audited receipts
- Config-as-code; cloud or self-hosted; data stays in your tenant

What you get

- ARIA Shield: one secure front door; allow/deny with reasons; budget checks; SIEM logs; no browser tokens
- Authorization (PDP): OpenID AuthZEN; obligations & budgets; break-glass/kill switches
- Authentication (IdP): short-lived tokens; works with Okta and Microsoft Entra ID; simple header integration
- Automation Studio: no-code connectors as MCP Tools; per-run policy; approvals, budgets, receipts; secrets via CyberArk/Vault
- Inventory: no-code inventory connectors; continuous discovery; feeds SailPoint/EmpowerID

Use cases

- Govern human and AI agent usage with real-time authorization and spend limits
- Standards-based real-time authorization (OpenID AuthZEN) for apps and AI processes
- No-code connectors and graph workflows as MCP tools for agents and humans
- Zero-trust API front door for SPAs/mobile: one origin, consistent enforcement and logs

Coexistence

- Keep Okta/Microsoft Entra (sign-in), SailPoint/EmpowerID (IGA), CyberArk/HashiCorp Vault (secrets/session). EmpowerNow adds unified authorization and an agent-aware gateway with budgets and receipts.

Open standards

- OpenID AuthZEN + governed OAuth; OIDC/SCIM/CAEP supported

Get started

- Quickstart: ARIA Shield + Authentication + Authorization; add Automation Studio and Inventory as you grow
