

EmpowerNow — Investor Deck (Draft)

1) Title / Category Claim

EmpowerNow — The Universal Agent Governance & Integration Layer

- No-Code AI Integration (**Automation Studio**)
- Policy & Constraints (**Authorization Studio**)
- Passports / Token Exchange (**Authentication Studio**)
- Identity Inventory & Lineage (**Inventory Studio**, supporting)
- Runtime Enforcement (**ARIA Shield • ARIA MCP Gateway**) — **Built by EmpowerID** (IGA/PAM since 2005; \$20M+ revenue; global brands)*
 - *EmpowerID customers cited for team credibility; EmpowerNow is a new, neutral product.*

2) The \$100B Problem (Why Now)

- **Runaway AI spend.** Duplicate calls, retries, agent sprawl, and opaque vendor pricing → **unbudgeted costs** with no per-call guardrails.
- **New AI attack surface.** Prompt-injection, data exfiltration, tool overreach/on-behalf-of abuse, and tool-chain supply-chain risk.
- **Agents need tools to do real work**—but tool access must be **least-privilege** with **crystal-clear auditability**.
- Governance is **platform-specific**; there's **no cross-platform enforcement or receipts**.
→ Rollouts stall without a layer that **creates tools safely, caps/controls spend, blocks attacks**, and **proves** every action.

Stat box (update live): AI \$/day governed: ____ • Spend blocked (402): ____% •

Pilot→Prod ≤90d: ____%

3) “Switzerland” Strategy → More Channels, Lower CAC, Bigger TAM

Neutral = we enable every stack instead of competing with it.

- **Neutral by design:** Like Switzerland hosts talks for all sides, we **integrate/OEM with all vendors’ agents**.
- **OEM to everyone = sell through everyone:** Okta/SailPoint/Microsoft/ServiceNow become **distribution partners**, not competitors.
- **Distribution arbitrage:** They keep the relationship; **we power agent security** across their estates.
- **The math (illustrative):** Direct only (win a slice) vs. **embedded across partner ecosystems (10–30× reach)**.

4) Live Demo (90s): **Author Once → Publish Many**

- Build once in **Automation Studio** (YAML) → publish to **MCP, OpenAI Functions, Microsoft Copilot**.
- **CRUD Service** turns any **API/DB** into **code-free connectors** that surface as **MCP agent tools**.
- Invoke from each: **Authorization Studio** applies constraints; **Gateway/Shield** block off-plan/over-budget; **Receipt** captured.
- **Takeaway:** unified governance **without** forcing a single platform.

5) Why Identity Experts Win

- **Enterprise trust:** 15+ years operating identity for global regulated brands (*EmpowerID heritage*).
- **From RBAC/ABAC to agents:** We already model **who can do what, for whom, under what constraints**—now applied to **tools, spend, and content** at runtime.
- **Distribution:** existing procurement paths → faster starts & references.

Footnote: Logos/clients are EmpowerID platform customers; EmpowerNow is a new product.

6) Agents ≠ Chat: Tools = Work (CRUD Service = Tool Factory)

- **Agents create value only through tools.**
- **CRUD Service** generates **code-free integrations** so any system **API** or **database** becomes an **agent-safe MCP tool** with schema, auth, and guardrails.
- **Author once** → **publish many**: packaged for MCP/Functions/Copilot/etc. with **policy hooks** baked in.
- **Outcomes**: time-to-first-tool <10 min; **safe expansion** of agent capability; **consistent governance** across platforms.

7) What We Are (Layer-2 Middleware)

- **Create tools fast** — **Automation Studio** + **CRUD Service connectors** → MCP Tools/Resources/Prompts; adapters for non-MCP.
- **Decide & constrain** — **EmpowerID PDP / Authorization Studio** → standardized decision (constraints/obligations/TTL).
- **Enforce & prove** — **ARIA MCP Gateway** (pre-exec), **ARIA Shield** (inline), **Receipt Vault** (cryptographic audit chain).
- **Stay accurate** — **Inventory Studio** keeps identity & entitlements fresh for PDP/PIP.

8) Platform Coverage (Adapters = Moat)

- Initial GA targets: **Anthropic MCP**, **OpenAI Functions**, **Microsoft Copilot**, **Google Vertex**, **AWS Bedrock**, **LangChain/LangGraph**, **LlamaIndex**.
- Principle: **author once** → **publish many** (shared schema; per-platform manifests).
- DX goals: **5-minute** tool creation; **1-line** policy call; **drop-in** budget/content controls.

9) Proof & Momentum

- **Adapter cadence**: weekly releases; public changelog.
- **DX metrics**: time-to-first-tool <10 min; **publish to 3 platforms** <1 hour.
- **Commercial signals**: platform POCs; SI design-partner outreach; pilot→prod targets.

(Add a small sparkline “weekly ship cadence” visual.)

10) Business Model (Clear & Credible)

- **Governed endpoints** (critical tools/routes): **\$500 / endpoint / month** (typical).
- **Decision usage** priced per 100k decisions; **Receipts** priced per 10k; **Catalog seats** for authors; **OEM/white-label** rev share.

11) Economic Framing (Realistic)

- Typical enterprise: ~**50 tools**, ~**20 critical endpoints** (each governs many agents).
- **Average account**: $20-50 \text{ endpoints} \times 500 = 10k-25k/month$ * * $\rightarrow$ ****120k-\$300k ARR** (+ usage + seats).
- **Scale scenario**: 1,000 mid-tier accounts $\rightarrow$ **120M-300M core ARR** (pre-OEM/usage).

12) Studios Overview (No-Code; Demo-Ready)

- **Automation Studio $\rightarrow$ CRUDService (backend)**
No-code MCP tool & workflow designer — turn any API/DB into **agent-safe tools** fast; publish across platforms with policy hooks.
- **Authorization Studio $\rightarrow$ PDP (backend)**
Policy UI for AuthZ (ABAC/constraints/obligations/TTL) — issue **standardized decisions** for budgets/content/params across all agents.
- **Authentication Studio $\rightarrow$ IdP (backend)**
Agent Passports & token exchange (on-behalf-of / least-privilege) — give agents **scoped identity** without long-lived tokens.
- **Inventory Studio $\rightarrow$ Data Collector (backend)** (*de-emphasized for AI*)
Identity & entitlement inventory/lineage — keeps PDP **context fresh**; primarily IGA-vendor scenarios.

Flow: Design (Automation) $\rightarrow$ Decide (Authorization/PDP) $\rightarrow$ Enforce (Gateway/Shield) $\rightarrow$ Prove (Receipts).

Monetization: Endpoints governed, decisions, receipts, author seats.

13) Runtime Enforcement & Proof (What Auditors Love)

- **Contextual authorization: EmpowerID PDP** evaluates **who/what/for whom/under what constraints** per call (attributes, roles, resource, environment).
- **Pre-execution gating: ARIA MCP Gateway** validates **plan & schema pins**; blocks unsafe/off-policy calls **before** the model runs.
- **Inline enforcement: ARIA Shield** applies **budgets (402), streaming/content caps, parameter allow-lists** during execution.
- **Inline enforcement (spend + egress): ARIA Shield** applies **budgets (402), rate/stream caps, parameter allow-lists**, and **egress filters** during execution.

Architecture (can be placed here or in Appendix):

Gate → Decide → Enforce → Prove.

14) Interface Moats (Patents)

- **Graph-Anchored ABAC** — policies as graph nodes → resolver → *standardized decision*.
- **Agent-Centric Workflow** — agent-ready next steps from YAML; universal auth; standardized audit logs.
- Locks **policy**→**decision** and **agent**→**next-step** interfaces that partners adopt.

15) Team — Distributed Technical Bench (No Single Point of Failure)

- **Patrick Parker — Founder & CEO (EmpowerID)**
20+ yrs enterprise identity; architected EmpowerID to \$20M+ revenue • RBAC→ABAC orchestration for regulated brands
- **Bradford Mandell — SVP Sales & Cofounder**
Olin BSBA; Harvard exec ed • *Add proof:* “Closed **\$XMM+** enterprise programs; multi-year SI/ISV alliances”

- **Ujwal Halkatti — Chief Operating Officer**
12+ yrs at EmpowerID; product quality & customer success • Former Dir. Software Dev, SolarWinds; Dir. Product, Tek-Tools
- **Carles Dalmau — VP, Product Architecture**
Enterprise security modeling & workflow orchestration; policy runtime design
- **Cristiana Vicovan — Director, Product Management**
Former startup CTO; **CTO of the Year (Europe)**; ex-Oracle Cloud — bridges product & architecture

One-liner: **Distributed CTO model → velocity, resilience, and zero key-person risk.**

Appendix (4 slides)

A1) Competitive + Distribution Frame

- **Gateways/observability:** lack **enforcement + receipts**
- **Orchestration frameworks:** no identity policy/budget/content/audit
- **IGA/PAM:** lack **agent runtime governance + receipts + adapters**
- **DIY:** slow/brittle

Distribution wedges: Installed base (EmpowerID), Platforms (OEM/white-label), SIs/GSIs (vertical kits), Marketplaces (AWS/Azure/GCP)

A2) Neutral by Design (Trust)

Separate infra/contracts from EmpowerID; neutrality advisory board; open-source **receipt verifier**; customer-controlled keys.

A3) KPIs to Instrument (Operating Cadence)

Pilot→prod **>60%** ≤90 days; **≥3 GA adapters in 2 quarters**; “publish to 3 platforms” **<1 hour**; GM **≥80%**; CAC payback **<12 mo** (direct).

Expansion levers: **endpoints/account, receipts/day, seats, partner-attached ACV.**

A4) 12-Month Milestones / Early Validation / Team & Ask

Coverage: MCP + two of OpenAI/Copilot/Vertex/Bedrock GA • Partners: 1 platform LOI, 2 SI design-partners • Scale: 1 F100 at **1k+ agents/tools** • Trust: OSS verifier + neutrality board.

Why distributed beats single-CTO: no key-person risk; parallel tracks (adapters, PDP, studios); proven tenure (12+ yrs); add CTO title later for external clarity.

Team & raise terms: [as drafted].

One-Pager (Handout)

EmpowerNow — The Universal Agent Governance & Integration Layer

What:

A neutral Layer-2 that lets enterprises **create tools once**, **enforce policy/budgets across platforms**, and **prove every action** with cryptographic receipts.

Tools = Work (CRUD Service):

CRUD Service turns any **API/DB** into an **agent-safe MCP tool**—code-free, schema-pinned, auth-aware, and **policy-ready**.

Fine-Grained Control:

ARIA MCP Gateway (pre-execution gating), **ARIA Shield** (inline enforcement), and **EmpowerID PDP** deliver **who/what/for whom/under what constraints** with **crystal-clear auditability**.

Studios:

- **Automation:** no-code tools; multi-platform publish (MCP, Functions, Copilot).
- **Authorization:** standardized decisions; **content/egress/params/budget** controls.
- **Authentication:** Agent Passports / Token Exchange (on-behalf-of; least privilege).
- **Inventory:** IGA identity inventory & lineage feeding PDP/PIP.

Runtime:

- **MCP Gateway:** plan/schema pins; blocks drift **before execution**.
- **ARIA Shield:** budgets (402), streaming caps, parameter allow-lists; **zero-token SPA** ready.
- **Receipt Vault:** decision_id + policy snapshot + schema/pin hashes → **immutable audit & cost attribution**.

Neutrality & Moat:

OEM/white-label by any vendor; independent from EmpowerID; **open-source verifier**; pending patents on **Graph-Anchored ABAC** and **Agent-Centric Workflow**.

Pricing (indicative):

$500 / \text{governed endpoint} / \text{month} * * + \text{decision} / \text{receipt usage} + \text{author seats} ; \text{OEM rev} - \text{share} . \text{Typical account} : * * 20 - 50 \text{ endpoints} \times 500 = 10k - 25k / \text{month} \rightarrow 120k - 300k \text{ ARR (+ usage + seats)} .$

12-Month Goals:

3+ adapters GA, 1 platform LOI, 2 SI partners, 1 F100 at 1k+ agents/tools, OSS verifier live.

CTA: Platform & SI intros • Lighthouse pilots • Data room access.

Presenter micro-script (20s)

“Agents only create value through **tools**. **CRUD Service** is our **tool factory**, making any API or database an **MCP-ready tool** with policy hooks. **EmpowerID PDP** decides context; the **ARIA MCP Gateway** gates **before** the model runs; **ARIA Shield** enforces budgets, parameters, and egress **during** execution. Every action is **receipted**.”
